Bogor Agricultural University, Entomological
Society of Malaysia**

HIGHLIGHTS

In commemoration of its 49 years of establishment, the Indonesian Entomological Society is holding the International Conference on Ethnoentomology and Entomological Sciences, which coincides with the 10th Congress of the Society. It is a great honor to invite all delegates from around the world to attend the Conference that will be held in Bali-Indonesia. The Conference will highlight the importance of ethnoentomology and the advances in entomological sciences for human life.

The theme of the International Conference is entitled “Learning from the Past, Adapting for the Future: Advancements in Ethnoentomology and Entomological Sciences for Food Security and Health”. Human-insect interaction has brought with it many unique knowledge, which is locally specific, and embodied the wisdom that different cultures have developed over centuries. This wisdom is slowly disappearing, hence rendering the importance to conserve the knowledge. This knowledge might hold important information to face the present day climate change challenges. This conference will also highlight the latest development in entomological sciences that spans from agricultural and medical entomology to basic sciences in molecular research. The Conference will provide researchers, academics, and practitioners an ideal platform to congregate, share information and discuss their scientific results and experience.

ICCIES is a great opportunity for delegates to engage members of various organizations, groups, and associations whose presence is essential for the advancements of ethnoentomological sciences in relation with food security and health issues.

OBJECTIVES

To highlight ethnoentomology and entomological issues, discuss solutions and share experiences in order to identify pragmatic and scientifically tested solutions in relation with food security and health issues that can be put into practice to benefit the environment and the society.

LECTURES

General Lectures will cover key topics and will be delivered by reputable scientists. Presentations and discussions of the key topics will be conducted in the parallel sessions, with various papers presented by stakeholders such as Universities, Research Institutes, Farmers, Growers, Associations, Students, Government Agencies, and NGOs.

CONGRESS

The Congress will be attended by members and non-members of Indonesian Entomological Society. It will also attract international participants who has interest in Entomology, Biology, and Conservation in the tropics

CALL FOR ABSTRACT

Papers are invited for oral or poster presentation at the Conference.

Please note the following deadlines:
